

Main Window:

paste_2.tiff ↵

The three sliders at the bottom of the main window control the viewing angles of the items selected in the *View* box. The angles are measured in radians with respect to the three orthographic axes. The black horizontal line in the vertical box at the left of the window graphically displays the magnitude of the surface flux. The white line in the center of the box represents zero flux. When

the black line is above the center line, the flux is positive. When it is below, the flux is negative.
