

# Modes:

Inclination has two main modes of operation: *simulation* and *reviewer*. The mode is set from the pop-up list in the upper left hand corner of the *Control Panel*.

paste\_24.tiff ↵

Simulation mode is default. You can not go to *Reviewer* mode if you have not taken data by running a simulation. When running a simulation data is taken that will be used in the *Reviewer*.

Anything done in the *Control* panel affects all simulations.
