The Simulation Mode:

Selecting Simulation mode will cause the Control panel to look similar the following. Simulation mode is used to set the block in motion and collect data.

paste_22.tiff ¬

The box labeled *Time* displays the current time of a running simulations. The box with the pop-up list labeled *deltaT* allows the user to change the time step taken between successive iterations. *Start* allows the user to begin the simulation, *Stop* allows the user to stop the simulations, *Init* allows the user to reset the simulations to their initial state, and *Step* allows the user to step through to the next iteration of the simulation.
