

Permission Options

(NeXT System 3 Only)

As of System 3, NeXT has introduced the concept of permissions for fax users. There are three different levels of fax permissions with the following attributes.

1. *Restricted* users can view, assign and delete only those faxes assigned to them by another user with higher level permissions.
2. *Trusted* users can view, assign and delete faxes that have been assigned to them. They can also do the same for newly received faxes which are currently unassigned.
3. *Unrestricted* users have the same permissions as trusted users. In addition, they receive notification of incoming faxes whenever (a) notification is requested upon receipt or (b) a fax is received and available disk space is low.

There must be at least one unrestricted user assigned to any NXFax configuration. If you press the Install button without assigning an unrestricted user, NXFax will post a warning and ask you to assign an unrestricted user.
