

# *Plot Inspector:*

The *Plot Inspector* allows the user to change almost any aspect of a plot. It consists of four parts: *Inspector*, *Add Item*, *Data Sets* and *Size*.

*Inspector* allows the user to change the aspects of a selected item.

*Add Item* allows the user to add various items to the plot.

*Data Sets* allows the user to select which data sets to display, and select the manner in which to display them.

*Size* allows the user to specify the size of a selected item.

Common to all parts of the inspector panel is the following:

paste\_3.tiff ↵

*Send to Back* places the selected item behind any items it overlaps. This makes items hidden by the selected item available for selection. *Send to Front* does just

the opposite of *Send to Back*.

The pop-up menu titled *Inspector* allows access to the other parts of the inspector panel listed above.

paste\_2\_1.tiff ↵

*Revert* resets all of the attributes to the last time OK was clicked.

*OK* must be clicked in order for changes to take place.
