

Graphics:

paste_8.tiff ↪

If a TIFF is dragged into the plot, it can be modified using this inspector. The *Drawing Operator* has two modes: *Composite* and *Dissolve*.

In *Composite* mode, the graphic can be placed in the plot using any of the methods in the *Compositing Operator* pop-up menu. All these methods work the same as the methods in *Icon* by Keith Ohlfs.

In *Dissolve* mode, the graphic can be dissolved by the amount specified in the *Dissolve Delta* box. A 0.0 dissolve delta will not change the original while a 1.0 dissolve delta will completely dissolve the original image.
