# *Credits:*

In 1990, Rose-Hulman Institute of Technology initiated a revolutionary new Integrated First-Year Curriculum for Science, Engineering, and Mathematics (IFYCSEM), also under NSF funding.   NSF also provides funds to hire students as NeXT software developers to produce   badly needed scientific software for the NeXT.   *Plot Editor* was originally developed by Steve Cape at Rose-Hulman in the summer of 1991.   It was designed to work with the Plot object which was originally developed by Tony Zamora. In the summer of 1992 I, David Holscher, took over the

effort to finish *Plot*. Extensive internal redesign was done which created the need for a more complete *Plot Inspector*, but little need for a change in the *Data Set Inspector*.   The new *Plot Inspector* was then incorporated into *Plot Editor*. You might see either the *Plot Inspector* or *Data Set Inspector* in other Rose-Hulman applications, where it will, of course, work the same.

*Plot Editor* is copyrighted © 1992 by Rose-Hulman Institute of Technology.
