

# ChangingValues.app

SHL Object Technology Center  
e-mail: otccore@bou.shl.com

## Overview

This application demonstrates the KeyValueType protocol of the Enterprise Object Framework. Whenever an association exists between a datasource object and a user interface widget, there is a well-defined algorithm for mapping values to and from object and datasource. This algorithm is encapsulated in the methods -takeValuesFromDictionary: and -valuesForKeys: methods of the object instantiated by the datasource.

NEXTSTEP 3.2 and EOF Release 1.0  
Sybase Adaptor  
pubs Database

## Program Organization

### *Important Files*

AppController.[hm] handles console and display updating.  
Catalog.[hm] is the class that is instantiated by the EODatabase.

## Revision History

June 94    Version 1.0.
