Overview

This example demonstrates how you can implement a custom enterprise object and map it and its attributes to the database.   In this example, the class Author is mapped to the authors entity in the Sybase pubs database through the EOModeler app.   The EOKeyValueCoding protocol (informal) is then implemented to transfer values to and from the object and database.

NEXTSTEP 3.2 and EOF Release 1.0
Sybase Adaptor
pubs Database

Program Organization

Important Files

Author.[hm] is our enterprise object.
Author.eomodel contains binding information and is created by EOModeler.app.
