

copy

copyWithZone:

(NSString *)expressionValueForContext:(id <EOExpressionContext>)context

Returns a quoted representation of the expression object that the receiver was created with. Sends `expressionValueForContext:` to the expression object and quotes the return value as explained in the class description.

initWithExpression:expression
quote:(NSString *)quote
escape:(NSString *)escape

Initializes the receiver, a newly allocated instance of `EOQuotedExpression`, to quote expression's expression value with quote and escape any occurrence of quote within the expression value with escape, as explained in the class description. This is the designated initializer for the `EOQuotedExpression` class. Returns self.
