

Network Services

Change export permissions

4padPointRule2.eps ↵

When you set up a file server to export directories, you also specify which computers can access them—with read/write, read-only, or root privileges.

You can change these permissions at any time.

18770_PointRule2.eps ↵

- 1 **Log in as root on the computer with the file server.**

If you don't log in as **root**, you can enter the **root** password if the User Authentication panel appears.

1PointDashedRule3Black.eps ↵

- 2 **Double-click NFSManager in /NextAdmin.**

427113_PointDashedRule3Black.eps ↵

- 3 **Select a directory at the top of the Exported Directories window ;../Reference/Tools/NFSManager/NFSManagerPanels/ExportedDirsWindow.rtf;;↵.**

If this window isn't open, choose Export From in the NFSManager menu, select a domain, and click OK.

964182_PointDashedRule3Black.eps ↵

- 4 **Type the name of each computer you want to have Read Only Access and click Add. Or select a name from the Read Only Access list and click Remove.**

You can type a host name, alias, or netgroup name.

662663_PointDashedRule3Black.eps ↵

- 5 **Type the name of each computer you want to have Read/Write Access and click Add. Or select a name from the Read/Write Access list and click Remove.**

As in step 4, you can type a host name, alias, or netgroup name.

559317_PointDashedRule3Black.eps ↵

- 6 **Type the name of each computer you want to have root privileges on the computer. Or select a name from the Root Access list and click Remove.**
Be sure the computers you add to this list are secured from unauthorized **root** logins.

814654_PointDashedRule3Black.eps ↵

7 Click OK.

465043_PointDashedRule3Black.eps ↗

These permissions apply the next time the computer starts up.
