

Network Computers

Add a computer automatically

4padPointRule2.eps ↵

You can add new computers to your network automatically if you've enabled automatic host addition.

768008_PointRule2.eps ↵

BEFORE YOU START: To be sure of the domain to which your computer will bind, and make sure that you enabled automatic host addition for only one domain on the local network ;EnableAutomaticHostAddition.rtf;;↵.

389539_PointDashedRule3Black.eps ↵

1 Attach the computer to the network and turn it on.

62468_PointDashedRule3Black.eps ↵

2 Enter a name for the computer at the prompt and press Return.

The name may be up to eight lowercase letters or numerals. Avoid special characters.

427113_PointDashedRule3Black.eps ↵

3 Type y and press Return.

If you set up password for automatic host addition, the configuration server prompts you for the password. Enter the password and press Return.

794249_PointDashedRule3Black.eps ↵

4 Double-click **SimpleNetworkStarter** in **/NextAdmin**.

681798_PointDashedRule3Black.eps ↵

5 Choose the option **Access shared network resources as a client.**^o

This option is in section 1 of the SimpleNetworkStarter window

../Reference/Tools/SimpleNetworkStarter/AboutSimpleNetworkStarter.rtf;;↵.

If you want to use the computer to provide network services, choose that option instead. You can ignore sections 2 and 3.

276739_PointDashedRule3Black.eps ↵

6 Click **Configure**.

472948_PointDashedRule3Black.eps ↵

SimpleNetworkStarter creates a host entry for the new computer in the **/machines** directory of the domain with automatic host addition. It also assigns an Ethernet address and an Internet address.

How to

You can enable automatic host addition when you first set up a NetInfo master server. Or you can enable it with the HostManager application.

;EnableAutomaticHostAddition.rtf;;↵ **Enable automatic host
addition**

You can also add a computer manually if you want to control the Ethernet and Internet addresses yourself.

;AddComputerManually.rtf;;↵ **Add a computer manually**

You can use NetInfoManager to check the **/machines** directory

for the Ethernet and Internet address of the new host.
