mouse.tiff ¬ Pointing Devices

Overview:

The Serial Mouse Device Driver provides support for most common serial mouse and track ball devices, including:

·   ALPS GLIDEPOINT
·   LogiTech FirstMouse
·   LogiTech MouseMan
·   LogiTech MouseMan Cordless
·   LogiTech TrackMan
·   Kensington Expert Mouse v2.0
·   Kensington Expert Mouse v4.0
·   Microsoft Serial Mouse
·   Mouse Systems PC Mouse III
    Note: The Mouse Systems PC Mouse III must be used in "Two Button" mode.   For more information, refer to the documentation supplied with the mouse.

The Serial Mouse Device Driver must be used in conjunction with the Serial Port Device Driver.   When configuring the Serial Mouse Device Driver, you will notice a box titled "Serial Port #" that contains a number.   This number tells the Serial Mouse Device Driver which Serial Port instance to use.   If only one instance of the Serial Port Device Driver is configured, then the number in the box should be 1.
