Documentation Note: GNU libg++

This documentation is reproduced exactly from the texinfo source for the **libg++** (version 2.0) documentation. NeXT has reformatted the documentation as RTF for your convenience in using Digital Librarian, but has not edited its contents.   Under NEXTSTEP the include file directory is simply **g++**, not **g++-include**, as indicated in the documentation.   The **g++** library to link your applications against is **libg++.a**.

The **libg++** documentation is shipped unindexed.   To most effectively index this material, execute the following command in a UNIX shell while logged in as

root:

```
ixbuild -fsv -LEnglish /NextLibrary/Documentation/GNU-libg++
```

See the **ixbuild**(1) manual page for information on the options given above.

The **libg++** documentation itself is copyrighted by the Free Software Foundation.   See **License.rtf** in this directory for more information.
