

## Lower Arc

In Lower Arc mode, your text is placed around the outside of the bottom half of the circumference of a circle. TextArt calculates the appropriate radius of the circle based on the length of your text. However, you can modify this in the Radius control panel, which appears in the upper right corner of the screen when you choose this (or Upper Arc or Circle) mode. See *Custom Radii* and *AutoCenter* for more information about the radius controls.
