Tim,

Most of the icons that I receive off of the list are not compressed in any form. I was able to reduce my local collection of icons by 50% by using the following program, which applies an LZW compression to each icon in a directory:

```
compressTIFFs -compressTIFFs
```

Unfortunately, it only works on one directory. I'm sure you'll be able to tweak it to make it recursive.

:-)

Zacharias.
