Sent to me by Aki Ohno <aohno@bmt.gun.com>. Picture of a pair of Converse high tops.

Fed through sketch filter. Background softened with the smudge tool.

The original - photographed after a particular raucous night last year at The Rat in Kenmore Square, Boston.

As above, filtered through corona. You could say that this image has been 'Guccioned.'

I guess that this belongs in your SneakerNet folder (or your Net folder if all you use sneakernet for your networking :-).

I don't know about others on this list, but since I started next-icon my File Viewer has become a very strange place. The last thing I thought it needed are pictures of my old sneakers, however now that I saved them as /tmp/.dir.tiff they actually look pretty appropriate.

I use these on floppies and call them SneakerNet. I wish I had an Open icon too!
