

Here is **My First Color Icon** TM.

If some body wants to do a B+W (or 12bit) version and send it to me I will package the tiffs in to one file.

He's asleep till you drag some thing into him
THEN IT **HURTS**.

also: I just found out that:

The NeXT dimension can hold up to **64meg** on board.

That comes from NeXT themselves (they never bothered to change the docs.)

Have fun Y'all..

garret

PS My apologies to Mr. Jones who I hope is working on a NeXT....

Subject: OWCH icon take two

Here is a RE-TAKE.

Tim Reed gave me a very nice compliment by sitting down and making a two-bit version of the Icon I sent out a couple of days ago.

I took what he had done and added a little transparency to the mix. Then I packed them all in to a single icon for your use.

These will be B&W for the world of mono people and color for the world of color. I have not seen what they would look like on a 12bit station.
