Subject: DOS filesystems

Since I'm the only kid on the block with a NeXT, I end up doing a lot of reading and writing to DOS disks. But I thought that using an image of a 3.5" diskette to represent a DOS disk really was not representative of that OS's characteristics. So I came up with the following:

Use these to replace the original DOS.fs.tiff and DOS.openfs.tiff in /usr/filesystems/DOS.fs (you have to be root to do this).

Ciao, Stefano

I need a cash register icon! Any and all accepted! Photo-real would be nice!

In return, I offer you these rather humble floppy disks:

Disks.tiff

ColorDisks.tiff
