Hi list folks,

is anybody else still reading this list, or am I the last
one who still uses NEXTSTEP/owns black hardware??

And this is a German news magazine you might have heard of:

<DER_SPIEGEL_Cover_64x64.tiff>

<DER_SPIEGEL_Cover_48x48.tiff>

Subject: Improved Der Spiegel icons, examples

Hi,

Ingmar Camphausen <ingmar@aurora.in-berlin.de> recently posted a couple of great
Der Spiegel icons. I added alpha to the images and produced the following:

48x48:

64x64:

I also added 2-, 8- and 24-bit representations to the 12-bit image.

Clearly this wasn't enough. I wanted to screw around with IconBuilder a little, and figured that I could use these images to make a new mail picture for myself and directory icon for my UNIX directory. Here's both:

Spiegel_Daemon.dir.tiff:

treed@bmt.gun.com.tiff:

I used IconBuilder to make these, and as usual when I use this product, it took absolutely no time. The panel that comes up when you paste into a document lets you quickly experiment with different postscript compositing operators before committing to one. If you've already got the rent covered and find an extra \$150 or whatever that Greg Lindholm <gsl@netcom.com> is asking for this software, write a check and send it to him. Well focused, productive app that I highly recommend.

Tim
