This is just the gnu out of Webster's made into an icon.

This is the icon I use for Emacs.app. I personally like it better than the kitchen sink. Granted, it lacks that same wry sense of humor, but I'm just a colorful kinda guy...

Subject: Less emaciated GNU

Here is my interpretation of the FSF Gnu, originally drawn as a bitmap on a SUN-2 (which dates it somewhat!) then ported using ImageViewer, and coloured. If anyone can produce a better coloured version, please post it! He looks a little happier than the version posted earlier...

Lo, again.

I've retouched my original GNU substantially since I first posted it. The shading is N times better, both on 2-

bit gray and 12-bit color displays. It's still thinner than the GNU just posted, but I like my GNUs lean and mean :-)

BTW, this was grabbed from the GNU in Digital Websters, then scaled, colored, etc, in IconBuilder...
