Hi,

These were scanned off the instructions of a video game (the Japanese version of Final Fantasy 4 by Square Soft) and processed by Image. I started this because I had a hunch about a bug in Image (copying a selection from a large document and pasting it into a smaller one causes the pasted portion to appear in a non-visible and inaccessible area - what an annoying bug!) and ended up screwing around with the filters and stuff that the program features.

I have no idea what these icons would be good for. Maybe good home directory icons for those of you without a scanner. The Wizard icons may belong in your Admin folder. Good luck!

These were copied and processed without permission!

Enjoy,

Tim
