Hello and a good new year to you..

Here's a thing.

it doesn't look like much but drag it around over other icons and watch...

this was done on a ND so I don't know what it's gonna look like on a color station.

*It was done by making a color almost totally transparent  
now on a ND the black is "Blank" like video... so anything black switches to  
color (eg there is nothing there except what little color is in the tiff)*

*on a station white is "Blank" so I think that white should change to color but I'm not sure...*

Now I'm trying to figure out how the high-lighting effect could best be put to use.

Garret Linn
