Subject: Cheese Preview

This posting is a bit premature; the long awaited **Adventures In Cheese** series is still in production. But what-the-heck - couldn't pass up a shot at getting on the Skylee CD and snatch some fame and fortune. Here's Eeeek!, the mouse from a few postings ago, tail-deep in cheese:

Subject: IconBuider `Alpha Pattern'

Here's what the `alpha pattern' (the entire area behind the mouse) looks like in IconBuilder:

<IconBuilderMouse.tiff>

But, of course, when you're actually seeing it,

the pattern is moving fairly rapidly from upper right to lower left. I've got an Intel based machine with a 101 keyboard. With this set-up, the Page Down key will invoke the pattern as well as the `1' key.

Note: To take this `picture', I: launched Grab.app; went back to IconBuilder , pressed and held down the `1' key; back to Grab for the selection tool and grabbed the picture from the IconBuilder window (with the CPU beeping angrily at me the whole time). After letting up on the `1' key, IconBuilder locked-up with the pattern still `running'. I had to kill IconBuilder to make it stop.

Subject: Duh ... Alpha?

duh.dir.tiff duh.opendir.tiff

Robert Kieffer set me straight on the non-existent `alpha pattern' lock-up

problem in IconBuilder.

It doesn't actually lock-up. Activating another app while holding down the `1' key in IconBuilder keeps the scrolling pattern going in the Iconbuilder window. To stop it, just go back to IconBuilder and hit a key. Silly me !

But ya see, I'm a mouse kind'a person; all those keys just confuse me.

Hey, did you ever notice that a 101 keyboard has 101 keys? What a coincidence! Ah ... on second thought, I'm not real great at math ... maybe I didn't count right.
