Subject: The Improv Guy

These directory tiffs are derived from the info panel of Improv (I think you have to do something like a command-alternate-control-shift-click in the space left of the logo to get it to appear). The first one is the original face scaled to icon-size and the other is the same face modified. I use these for my home directory:

They are called Glenn.dir.tiff and Glenn.opendir.tiff respectively (Glenn was the name of the tiff in the Improv nib file. I have no idea who this is supposed to be).

enjoy,
paul kim
