Ahh, the creative frenzy... or was it a plagiaristic frenzy? I can't decide.

I wont mention where I got these, but I scanned 'em in (Scan-X, the program in need of redesign) and shrunk 'em up (WetPaint, only shrinks in whole numbers %-/) and alphaized (Icon, I just find it a bit simpler than WetPaint)

You may still like to doctor the edges a bit, but I don't mind 'em.

(Selecting the icons above will show you the alpha)

Editorial Comment: Sometimes you just don't need color!

Kind of a Semi Evolution-of-Communications.

Subject: medical icons

Here's a start on some medical icons. They're not up to today's standards; I did them about 4 years ago.
