A picture of a cat, scanned and processed by TIFFany, then hand-finished in IconBuilder. 2, 12, 24 bit images included. I have no idea what this would be appropriate for, but I really like it anyway.

Tim

I believe I only posted the .dir version of this icon, but it's late and I'm not sure anymore. Here's GhostCat.dir.tiff and GhostCat.opendir.tiff. For some reason, this has been a hit with everyone who's seen it.
Enjoy,

So I want you all to meet my new space kitten!!
She fell into the bath tub so she is not quite so fluffy now

This came from a 2-bit picture off the net of Darcy Brockbank's cat. Scaled and processed with TIFFany 1 and painted in IconBuilder. I used TIFFany to alpha out the background, scale a section of the image, and smooth and smudge the alpha border and sections of the image.
