Subject: Re: Short Hidden Animation in NS/FIP
Reply-To: joeba@jbc.com

By editing the "infomation.script" file you can change the animation sequence and duration!   We did it at work today and had Steve jump out of the box!
 (image numbers start from   bottom in "infomation.tiff", #0, #1...)

For those of you running **NEXTSTEP/FIP**, there is a short hidden animation in the Info panel of Configure application. While in Info panel, hold down both Command and Alternate keys and then click on the Intel/PC icon, you'll see what I mean.

. . .

Does anybody how to make Steve Jobs' head pop up instead of NeXT logo? It would be cool if I can play "Hi this is Steve Jobs. I wanna welcome you to NeXT world." sound file when Steve's head pops out of the Intel/PC icon :-).
