

# DataPhile Sample Databases

**Contents:** This directory contains sample databases which you can use as templates and inspiration.

**BugTracker.dp** : is a template for developers to track bugs while developing applications.

**CalculatedAddress.dp** : shows you how to concatenate parts of an address to create one calculated address without blank lines when a field is empty.

**Calendar94.dp & Calendar95.dp**: shows you how to make databases with daily and weekly calendar views.

**Gdead.dp** : is a cassette labeling database with several hundred set lists of San Francisco's favorite band. Clone it to track other performer's shows, or add your own collection to it.

**ModuleDataBase.dp** : describes the various modules which can make up novel square dances.

**Network.dp** : tracks the hardware on your network. Log serial numbers, peripherals and memory available, great for SysAdmins!

**PayCheck.dp** : helps automate the process of figuring out pay checks with built in calculations of FUTA and FICA, Net Pay and deductions. Shows off the calculated field functions.

**PhotoAlbum.dp** : keeps track of slides and photos in a simple, roll by roll, manner.

**SingingCallFigures.dp** : has more square dancing stuff.
