

## Quick Loading of Entry Lists

As you know, you can add lists for ease of data entry to any text, value or money field via the Define...

Options panel and this switch:

paste\_0.tiff ↵

A new feature for V1.0.1 April 16th, 1992 is the ability to read in ascii files to populate the pop-up entry lists. You'll find an "Import..." button on the Entry List panel:

paste\_3.tiff ↵

which runs the Open Panel to specify the file to import and a pop-up button to specify which delimiter separates the list entries. By default, it is a Return:

paste\_2.tiff ↵

Try loading in the provided States and Cities entry lists!
