	Introduction	xv
	About This Guide	xv
	Audience	xv
	Document Overview	xvi
	Related Documentation	xvii
	Reference Material	xvii
	Notation and Syntax Conventions	xviii
1.	Introduction to Device Drivers	1
	Driver Overview	2
	Device Types	2
	Levels of Device Drivers	3
	System Hardware	4
	Hardware Platforms	5
	Bus Interfaces	15
	System Software	18
2.	Writing a Device Driver	21
	Creating Device Drivers	21
	Creating User-level Device Drivers	21
	Creating Kernel-level Device Drivers	22
	Device-special File	22
	Creating Device-special Files	23
	Major and Minor Device Numbers	23
	Device-special File Example	24
	Configuration Files	25
	Including a Device Driver in the Kernel	26

- Driver Entry Points 28
 - Missing Driver Entry Points 29
 - Character and Block Entry Point Driver Routines 29
 - Writing Other Driver Routines 42
 - STREAMS Driver Entry Points 51
- 3. Writing a VME Device Driver 57**
 - VME-bus Interface Overview 58
 - VME-bus Adapter 59
 - VME-bus Address Space 59
 - VME-bus Read-Modify-Write Cycle 60
 - VME-bus Adapter Requests 61
 - VME-bus Interrupts 61
 - Distribution of VME Interrupts on Multiprocessors 62
 - Choosing a Driver Model 63
 - User-level VME-bus Device Driver 63
 - Kernel-level VME Device Driver 64
 - Kernel-level General Memory-mapping Device Driver 64
 - Writing User-level VME Device Drivers 64
 - Example VME Device Driver 66
 - Using mmap 72
 - User-level DMA Library (udmalib) 75
 - Writing Kernel-level VME Device Drivers 78
 - Determining VME Device Addresses 78
 - Including VME Device Drivers in the Kernel 79
 - Writing edtinit() 82
 - VME Interrupt Handler 87
 - Programmed I/O (PIO) 88
 - DMA Operations 91
 - VME Devices with Scatter/Gather Capability 93
 - Using DMA Maps 95
 - DMA on A24 Devices with No DMA Mapping 98
 - DMA on A32 Devices with No Scatter/Gather Capability 102

- 4. Writing an EISA Device Driver 105**
 - EISA-bus Interface Overview 106
 - Initialization 106
 - EISA-Bus Locked Cycles 107
 - EISA-Bus Request Arbitration 108
 - EISA-Bus Interrupts 108
 - EISA-Bus Data Transfers 108
 - EISA-Bus Address Space 108
 - Byte Swapping 110
 - Choosing a Device Driver Model 110
 - When to Write a User-level Device Driver 110
 - When to Write a Kernel-level Device Driver 111
 - When to Write a Kernel-level Memory-mapping Device Driver 111
 - Writing a User-level EISA Device Driver 111
 - User-level EISA Special Files 112
 - Using the mmap Operating System Function 112
 - Writing a Kernel-level EISA Device Driver 113
 - Configuring a Kernel-level EISA Device Driver 113
 - Determining ISA/EISA Device Addresses 114
 - Including EISA Drivers in the Kernel 114
 - Writing edtinit() 122
 - I/O and Memory Space Initialization 124
 - Dynamic Resource Allocation 125
 - EISA Locked Cycles 129
 - DMA Address Mapping 129
 - EISA DMA Utility Functions and Structures 130
- 5. Writing a SCSI Device Driver 131**
 - SCSI-bus Interface Overview 132
 - Choosing a Driver Model 132
 - User-level SCSI-bus Device Driver 133
 - Kernel-level SCSI Device Driver 133

- User-level SCSI Device Drivers 134
 - Creating Device-special Files for User-level SCSI Drivers 135
 - dsreq – User-level Driver Communication Structure 136
 - dslib Routines Description 143
 - SCSI Open and Close Driver Routines 144
 - SCSI Function-Building Routines – Group 1 145
 - SCSI Function-Building Routines – Group 2 148
 - Using the dslib Routines 156
- Kernel-level SCSI Device Drivers 157
 - Configuring a Kernel-level SCSI Driver 157
 - Writing a SCSI init() 159
 - SCSI Device Interface Overview 159
 - Using the SCSI Access Routines 168
- SCSI Device Driver Example 171
- 6. Writing Kernel-level GIO Device Drivers 177**
 - GIO-bus Architecture 178
 - Determining GIO Device Addresses 179
 - Including GIO Device Drivers in the Kernel 180
 - Creating a System File 180
 - Creating a Master File 182
 - Creating a Boot File 182
 - The GBD Example 182
 - Writing edtinit() 183
 - GIO-specific Functions 187
 - setgiovector 187
 - splgio0, splgio1, splgio2 188
 - setgioconfig 188
 - GIO Interrupt Handler 189
 - Programmed I/O (PIO) 190
 - DMA Operations 192
 - Memory Parity Workarounds 193
 - GIO Devices with Hardware-supported Scatter/Gather Capability 195

- DMA on GIO Devices Without Scatter/Gather Capability 198
- Device Driver Example 200
- 7. **Writing Kernel-level General Memory-mapping Device Drivers** 213
 - Including a Memory-mapping Device Driver in the Kernel 214
 - Mapping and Unmapping Functions 214
 - Sharing Kernel Memory with a User Program 218
 - Example Program 219
 - Returning Opaque Handle Data 221
- 8. **Writing Multiprocessor Device Drivers** 223
 - Preliminary Considerations 224
 - Shared Data between Upper-half and Interrupt Routines 225
 - Protecting Shared Data Among Upper-half Routines 226
 - Semaphore and Spinlock Calls 227
 - Multiprocessing STREAMS Drivers 231
 - STREAMS Monitor 231
 - STREAMS Example 233
- 9. **Writing Network Device Drivers** 235
 - Preliminary Discussion 236
 - IRIX Kernel Networking Design 236
 - ifnet Driver Interfaces 238
 - Multiprocessor Issues 239
 - Compilation Flags for MP TCP/IP 240
 - Input Queueing Example 241
 - Interrupt Handler Example 242
 - ifnet Device Driver Example 243

- 10. Driver Installation and Testing 269**
 - Using the Kernel Debugger 270
 - Making a Debuggable Kernel 270
 - Making an ASCII Terminal the Console 272
 - Invoking symmon 273
 - Displaying and Changing Registers 274
 - Using symmon Commands 277
 - Using symmon's Kernel Print Command 296
 - Multiprocessor Debugging 301
 - Configuring the System Software 301
 - Preparing the System Hardware 301
 - symmon and Multiprocessor Debugging 302
 - Forcing System Memory Dumps 303

- 11. Kernel-level Dynamically Loadable Modules (DLMs) 305**
 - Module Configuration 306
 - Using a Dynamically Loadable Kernel Module 307
 - Load 307
 - Register 308
 - Unload 309
 - Unregister 309
 - List 309
 - Master File Configuration 310
 - Auto Registration 310
 - Auto Unload 310
 - Kernel Configuration 311
 - Module Entry Points 311
 - Module Initialization 312
 - Edt Type Drivers 312
 - Library Modules 312
 - Loadable Modules and Hardware Inventory 313
 - Run-time Symbol Table 313
 - Debugging Loadable Kernel Modules 314
 - Load/Register Failures 315

	Example 1	316
	Example 2	317
A.	System-specific Issues	319
	CPU Types	320
	Data Cache Write Back and Invalidation	321
	Flushing the Write Buffer	324
	Registers and Register Optimization	324
	Reliable Multiprocessor Spinlocks	324
	VME Slave Addressing	325
	VME Master Addressing	326
	VME-bus Space Reserved for Customer Drivers	329
	POWER Indigo2 and POWER CHALLENGE M Drivers	330
	Sharing Data Between CPU and Peripheral Devices	332
	Using mmap()	332
B.	SCSI Controller Error Messages	333
	Introduction	334
	Sense Key Information	335
	SCSI Driver Error Messages	340
	SCSI Driver Debugging Messages	342
	SCSI States and Phases	344
C.	Device Driver Migration Notes	349
	Introduction	349
	Intended Audience and Prerequisites	349
	Background	349
	Migration Overview	350

- IRIX 4.x to 5.x Migration 352
 - SVR4 API Changes 352
 - STREAMS Changes 352
 - DDI Changes 352
 - DKI Changes 353
 - CHALLENGE/Onyx Family Support 354
 - Kernel Configuration Issues 356
 - Equipped Device Table (EDT) Changes 356
- IRIX 5.2 to 5.3 Migration 359
 - Standard Device Drivers 359
 - STREAMS Modules 360
 - ifnet Drivers 360
- Migration to IRIX 6.0 366
 - Virtual Page Size 366
 - ioctl Support 367
- Glossary 369**
- Index 393**
