Phone: 304-293-5192

Description

WVNET, the West Virginia Network for Educational Telecomputing, supplies computing services to West Virginia's higher education institutions. The central site in Morgantown provides telecomputing for users at more than twenty remote sites.

The WVNET communications system is an intrastate network of Ethernet LANs, which support DECnet, LAT, and TCP/IP traffic. Digital T1 and analog telephone circuits connect the central and campus computing facilities.

Operating systems at WVNET include the MVS/XA (running OBS WYLBUR, ADABAS and CICS), VM/XA, and VAX/VMS. The *WVNET Software Guide*, which describes academic and administrative software on these systems, is available for \$5.90 (including postage).

Network Access

WVNET users are connected to the NSFNET backbone via SURAnet. Connectivity is also provided via CREN (BITNET).

Who Can Use the Network:

Organizations that are located in West Virginia and involved in education, research, or the economic development of the state can use WVNET. Nonprofit institutions may become associates. Examples of unacceptable usage include commercial order-entry and advertising commercial products.

Miscellaneous Information:

Interim Director: Henry Blosser, U1473@WVNVM.WVNET.EDU

New Accounts: John Fahey, U1440@WVNVM.WVNET.EDU
