Subject: Comments to accompany a recommended "YES" vote on
          ISO/IEC CD 10737 (Transport layer managed objects)

Task group X3S3.3 recommends that X3S3 approve a "YES" ballot response to the SC6 letter ballot on ISO/IEC CD 10737, and that the attached comments accompany the USA ballot response.

Comments on ISO/IEC CD 10737

1. On page 15, under the TSAP managed object, there is a comment that begins "The Transport address..." This comment is misleading, since the TSAP managed object contains only the Transport selector part of the TSAP address, rather than the full Transport address. Also, the Transport address may contain one or more NSAPs. This comment should therefore be deleted.

2. In Annexes A and B, there are statements that the annexes will be deleted at some point in the future. We believe that the material contained in these annexes is very useful, and should not be deleted. Annex B is especially useful; it is a very simple and easily-understood way in which to see all of the Transport objects, and their attributes and classes, without being an expert in ASN.1.
