

WHAT IS UMITXIT?

Umixit is the interactive future of recorded music. With a Umixit-enabled CD and a personal computer, any music fan can edit selected songs, one instrument at a time, and make their own mixes and remixes.

This enhancement comes on the CDs that you buy in stores bundled with the music itself!

WHAT CAN I DO WITH A UMITXIT CD?

With a Umixit CD, you can do just about anything the producer in the studio could do. Don't like the bass? Take it out and record in your own. Solo the guitar, even slow it down so you can learn the part. Sing your own lyrics in, karaoke style. Slice and dice the entire song DJ-style. Transform the whole song by adding loops, effects, and tracks to the music that you already buy in stores.
