Information on Licensing of Heaven Nodes Light

This copy of Heaven Nodes Light (HNL) is the 25 node shareware version of Heaven Nodes. The registered copy of HNL is a 100 node version. The full (commercial) copy of Heaven Nodes is a 500 node version that contains more functions and features providing full network management, and is available directly through D-TECH, Inc ("dTech"). If you find HNL useful and continue to use the program, we strongly encourge you to register it. With registration, you will receive the latest 100 node registered version of the HNL software, a comprehensive printed manual, software installation support, program operation support, and access to the dTech Support BBS.

Because this version of HNL is shareware (and not free), dTech will provide support only for registered users of the program. Bug reports are always welcome.

This version of HNL is limited to 25 nodes. It is not restricted to the number of file servers or domains. It is restricted to use on a single management console (PC). You are free to use the software internally for one month to test drive it. You must register the software to continue to use it after that time. You must have a Value Added Reseller (VAR) contract with dTech to use or install any version of the software externally or for commercial purposes.

Registration of HNL is as follows:

> Registration fee is $39.95.
> Number of nodes is increased to 100.
> Manual and latest version are shipped via ground.
> Software installation support is provided.
> Program operation support is provided.
> Access to dTech BBS is set up.

You may register HNL by completing the accompanying registration form. Please read the license agreement before you register the product.
