

## **Game description**

The rules of the game are very simple. Your aim is to open all windows. Click on one window to toggle its state. But the other windows in the same row and in the same column will be toggled, too. After passing the first layer you lift up to the second layer. Something wonderful is happened on this level. Suddenly one of the windows toggles its state. When passed you reach the third layer. It is more difficult to pass this one.
