

## Sheet1

```
\X    /WGC12~
      {PGDN}{PGDN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}
      /M{PGDN}{PGDN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}~
      {HOME}{RIGHT}~
AGN   {END}{DOWN}
      /M{PGDN}{PGDN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}{DOWN}~
      {HOME}{END}{RIGHT}{RIGHT}~
      /XGagn~
```

Install the macro on row 1 to the right of the last column you think it will need. It produces columns of 50 calls. Do a Range Name Label Right to pick up \X and AGN. It ends by hitting row 2048. Use CTRL-BREAK and ESCAPE to end the macro.

If you are combining a MIXED file of two columns, use the COPY function to combine the two columns into one. Save the sheet before deleting the partial column of data.
