Recipe Stack 2.0b

This stack was designed to aid you in organizing your cooking recipes. It consists of an index card, a browsing card, a conversion card, and recipe cards. The index card allows you to generate a list of recipe titles based upon easy to set search criteria. The browsing card allows you to search/examine individual cards based on user specified search criteria. The conversion card will help you convert grams to ounces, teaspoons to cups, etc... The recipe cards contain your cooking information and additional information that may aid in your future recipe searches (e.g. vegetarian, lactose free). Each recipe card is filed under a main heading (e.g. soup) and a sub-heading (e.g. meat) to aid in browsing for a particular recipe.

For those who used my Recipe Stack 1.0, this version is a tremendous improvement.

This program is Foodware. If you use it to organize your recipes, please send me your best recipe as payment.

This version is a beta release because I've been adding new features faster than I can comfortably test them.

Send any bug reports, comments or foodware fee to:
