Compresses files to save disk space and reduce electronic mail transmission time. Add 'small' to any file or folder name and it will instantly take up 50% less space. StuffIt automatically compresses any file which hasn't been modified recently. Add '.sit' or '.sea' to any file and it instantly becomes a StuffIt or self-extracting StuffIt archive. StuffIt Deluxe's archive management program lets you UnStuff individual files from an existing archive, segment files into disk-sized pieces and manage inside archives: add new files to existing archives, manipulate multiple archives simultaneously; stuff files according to specific criteria; protect files with your own passwords.
