

Synchronize! automatically keeps the documents on two or more Macs up to date, by copying the newest version of those documents to the other Mac. It makes sure your desktop Mac and your PowerBook, or your Mac at home, have the most recent versions of your documents. Using Synchronize!, all you do is select two folders on your desktop. Synchronize! identifies documents which correspond between the two folders and copies the newest document to the other folder.

Synchronize! Pricing;  
1 copy; £39.00.
