

Removes jagged edges from pictures produced in your drawing and presentation applications, using true subpixel anti-aliasing for superior results. Turns your presentations into a double-clickable application, containing all your slides. Builds movies from any series of individual pictures. Compresses pictures for memory saving. Uses Publish and Subscribe to integrate with your drawing program; works perfectly with TrueType and ATM fonts. (Requires a colour Macintosh and System 7; not intended for use with bitmap pictures from scanners or painting applications).
