

This package contains five innovative utilities by Jeffrey Robbin.

- Conflict Catcher can isolate INIT-induced problems that occur when you turn on your Macintosh, and those that appear within a program. It can find repeatable problems caused by an INIT, Extension, Control Panel Device or other Startup File. It can even find problems caused by several conflicting INITs.
- Memory Maxer accesses all available memory for programs with system 7.
- Color Coordinator adjusts your colour settings automatically.
- HotDA opens Apple Menu items with a keystroke.
- Whiz-Bang Window Accelerator closes and opens windows as fast as lightning.

Conflict Catcher Pricing;
1 copy; £45.00.
