

Macintosh System Software Version 7.1 brings your Apple Macintosh personal computer more powerful capabilities and greater ease of use. System 7.1 comes with all of the features of the original System 7 release. One of the most significant advances in personal computing since the introduction of the Macintosh, award-winning System 7 makes any Macintosh computer ready for hundreds of applications that take advantage of its power. And since System 7 runs virtually all current applications, you'll enjoy its benefits right away.
