

A screen movie utility that records everything on your screen in real time to a standard movie file. Supports all standard Macintosh animation formats (e.g. QuickTime and PICS). Anything on the screen can be recorded - menus, cursors, dialogues, whatever. Stop recording at the touch of a key and you have a complete screen movie. Customize your movie frame rate, capture area, and function keys. Playback your movie within MoviePlay (supplied), which also allows you to share your movies with others; or to pull any frame out of your movie as a still picture screen shot.

CameraMan Pricing;

1 copy; £79.00. 3 copies; £179.00. 5 copies; £275.00. 10 copies; £475.00.
