

A compression and playback system for digital videos, animations, images and sound on all major computing platforms: Compile multimedia productions on Macintosh for playback on Macs, PCs running Windows 3.0 or SPARCstations. Makes all audio/visual files, including QuickTime, platform independent. PACo Producer runs even the most complex animation in less than one megabyte of RAM. Its sound synchronization coordinates sound files with your animation or video. XPlayPACo XCMD provides detailed control over playback and presentation of PACo files, with powerful scripting commands. Save on test-pressing charges with the PACo CD-ROM Simulator: test and revise the playback performance of your PACo files for CD-ROM delivery before paying mastering charges.
