

Disk Copy 4.2 is the standard Apple disk duplicating software that allows you to copy disks using the disk images that are downloaded as part of the process of purchasing products from the Instant Access CD. In order to backup your purchases simply download Disk Copy, double click each image in turn, click the "duplicate" button in the main Disk Copy window, and insert a blank disk. Disk Copy will then write an exact copy of the disk image to the floppy. You can then store your backup floppies in a safe place.

Disk Copy 4.2 is free to download. Simply click the install button, and choose where you would like the browser to install it.
