

SlideShow Help

This is your chance to bring together all the spectacular art you've produced. Use SlideShow to link as many as 99 pictures, animations, or digital movies together to make a multimedia presentation of sights and sounds. Just fill each van with the clip or image you like, then add some sound effects. Finish your slide with one of the SlideShow's professional-looking transition effects.

To preview the contents of a moving van, click once with the mouse on that van.

To stop the show, click twice with the mouse while the slide show is playing.

To see how long that slide will be displayed in your slide show, click on the time slider bar at the bottom of the moving van with the mouse. If your slide contains a digital video file, the time slider control will allow you to specify a variety of display options for that digital video file.

SlideShow productions can be saved as slide shows or as digital video files. However, slide shows that contain digital video files cannot be saved as digital video files.

Check out the demo slide show on your Kid Pix Studio CD in the Galaxy Show folder. It's out of this world!
