

# About This Shareware

The PostNet! shareware package consists of four files.

You may distribute copies of this shareware package to others. However, all of these files must be distributed together. See the section titled Licensing, Distribution and Limitation of Liability for more information. We would also appreciate that you remind your friends/associates that PostNet! is a shareware product and that sending payment is a requirement.

PostNet! has been tested by the San Francisco Branch of the USPS and passed their Bar Code Sorter readability tests. Because the readability of bar codes varies with the resolution capabilities of your printer, we recommend that you print a few samples with your printer and that you take these samples to the Bulk Mail division of your post office to ensure your bar codes are readable by their scanners. This is an especially important precaution if you plan to print with a dot matrix or a non-postscript printer!

We are selling PostNet! for \$30.00. Considering the substantial savings in postage you will achieve with this software, please give us your vote of confidence and support by sending payment.
