

I bought my first computer, an Apple II when I was 15 years old. From then on, I was hooked on hacking. In college, at the State University of New York at Albany, I studied computer science and received my BS in 1986. I went immediately to Boulder to attend graduate school at the University of Colorado. In Boulder, I developed my skills as a skier, mountain biker, rock climber, windsurfer, and of course, computer scientist.

I have worked on several interesting course projects which have led to publications, but my thesis project, Euclid, is my primary interest. It has evolved through several incarnations and is currently running on the Macintosh. This is what I am presenting here.

I spent the summers of '90 and '91 in Cupertino, working for Apple Computer, Inc. There I worked at two levels of collaborative computing. In the Advanced Technology Group ('90), I worked on a high-level prototype of a collaborative environment for the future. In the Collaborative Systems Development group ('91), I helped the group implement a platform on which collaborative computing can be achieved.
