License Package Authoring Tool Help Index

Description

The License Package Authoring Tool (LPK) allows you to author an LPK file.

An HTML Page with licensed controls requires a single associated license package which stores the run-time licenses for all the controls used on the page. The HTML page should point to a license package via a relative URL. This tool allows you to author a license package file.

For more information on Licensing, please refer to the following document.

Title: Online Licensing of ActiveX controls.

Using LPK Tool

LPK_TOOL displays two list boxes.

Available Controls List Box

The first list box, "Available Controls", lists all controls registered in your system.

Controls in License Package List Box

The second list box, "Controls in License Package", lists all controls, whose licensing information, if available, will be stored in the LPK file. The Licensing information will be save when you invoke the 'Save & Exit' button.

Add Button

You can select 'controls' in the 'Available Control List Box' and use the 'Add' button to instruct the tool to add it to the LPK file. LPK_TOOL will respond by moving the selected controls to the "Controls in License Package" List Box.

Remove Button

You can select 'controls' in the 'Controls in License Package List Box' and use the 'Remove' button to instruct the tool not to add it to the LPK file. The LPK_TOOL will respond by moving the selected controls to the 'Available Control List Box'.

Save & Exit Button

The 'Save & Exit' button will instruct the tool to save the licensing information to the LPK file. LPK_TOOL will prompt for a file name and save the Licensing information in the file name provided. LPK_TOOL will terminate after saving the file.

Cancel Button

The 'Cancel Button' will terminate the application without creating the   LPK file.

About Button

The 'About Button' will display the version information.

Help Button

The 'Help Button' will dislay the help file for the tool.

Controls supporting License - check Box

When checked, LPK_TOOL will display only those controls which support License. (IClassFactory2 interface).

Note

This tool makes use of the License Manager components. Please make sure the License Manager is installed on your system and registered before you use this tool.
